DEPARTMENT OF BIOSTATISTICS AND BIOINFORMATICS

Open Rank (Assistant/Associate/Full Professor) – Comparative Effectiveness

The Department of Biostatistics and Bioinformatics (B&B) at Duke University is conducting a search for candidates for open-rank faculty positions. B&B is an integral component of one of the nation’s foremost medical research enterprises. The department currently has approximately 55 faculty members collaborating closely with both clinical and basic science investigators.

The faculty statistician will work with the Duke Clinical Research Institute on one or more of a number of large initiatives, both federally and industry supported, that are in need of statistical leadership. In addition to general statistical experience, the ideal candidate will have expertise in the development and application of methodology supporting comparative effectiveness research in registry or rather non-randomized data.

Working closely with medical colleagues, the candidate will:
- Lead the statistical development and analyses for a variety of studies.
- Participate in strategy sessions for designing and implementing clinical studies.
- Develop novel comparative effectiveness approaches for:
  - treatment selection
  - evaluation of important factors and factor clusters related to risk of disease
  - epidemiological studies in disease prevention or control
- Take a major role in applications for external funding, either as a Principal Investigator or as a co-Investigator.
- Upon completion of studies and analyses, actively participate and collaborate in preparation of scientific publications based on the results and presentations of findings at local, national, and international meetings.
- Disseminate the information on these approaches through presentations at major statistical meetings and publications in major statistical and clinical journals.
- Interface with other statisticians and computational biologists from the Duke Department of Biostatistics, the Duke Clinical Research Institute, Duke University Health System and external public and private entities.

Requirements:
- A PhD degree in biostatistics, bioinformatics or a related field
- Experience in development and application of methodology for comparative effectiveness research
- Experience as a collaborating statistician on a variety of study designs
- Professional knowledge of biomedical research
- Experience in statistical software/programming
• Highly self-motivated individual, enthusiastic about scientific discovery and able to collaborate closely and effectively with other members of a research team
• Excellent communication skills (verbal, written and presentation)
